

NBC Meshtec Inc.Introduces CO₂-free Electricity at Yamanashi Tsuru Factory

—Toward virtually zero CO₂ emissions use of electricity—

By joining the *Furusato Suiryoku Plan*, a plan available from *Yamanashi Power NEXT*, NBC Meshtec Inc. (President: Tetsuya Kaji), a member of Nisshin Seifun Group, seeks to achieve virtually zero CO₂ emissions from the use of electricity at its Yamanashi Tsuru Factory.

Yamanashi Power NEXT is the name of the electricity supply brand jointly managed by the Yamanashi Prefectural Government and TEPCO Energy Partner, Incorporated. *Furusato Suiryoku Plan* is a 100% renewable energy power supply plan based solely on electricity generated at hydroelectric power plants operated by the Yamanashi Prefectural Enterprise Bureau.

By joining the *Furusato Suiryoku Plan*, the Yamanashi Tsuru Factory seeks to achieve virtually zero CO₂ emissions. Formerly, CO₂ emissions generated from the use of electricity at the facility amounted to some 2,900 tons annually.*

Since the breakdown of this plan's fees includes funding for environmental conservation projects and other such measures in addition to the standard electricity tariff of TEPCO Energy Partner, by joining the plan, the company can also contribute to environmental conservation in Yamanashi Prefecture.

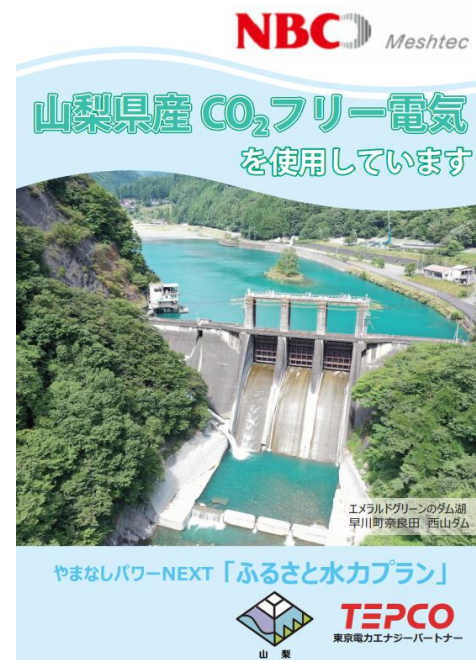

We're committed to advancing environmental conservation activities to realize a carbon-free society in the future.

*Calculated based on the company's FY2021 electric power consumption results
